NEWS from the Olaer Group

Off-line system operating day and night

For long hydraulic system life

Accessibility and reliability in operation

Compact and quiet

Low power consumption

Easy to retrofit when rebuilding a system

Equipped with Oiltech's new filter unit FX3

Clean oil day and night

New DU03 oil filter operates day and night

Clean oil cannot be over emphasised when it comes to reliability in operation in hydraulic systems. New, DU03 off-line oil filter operates day and night independently from the main system to avoid differences in pressure and flow conditions. Efficient operation, long component life and long oil durability are very good reasons for considering the extra cost of fitting a DU03 in your hydraulic system.

Quiet and compact

Quiet, compact and low power consumption makes DU03 ideal for installation in hydraulic systems. The

circulation pump from our QPM range of pumps provides for excellent oil circulation and cleaning. Standard DU03 pump capacity is 10 to 80 l/min.

DU03 is ideal in applications exposed to:

- low oil flow
- unfiltered return lines and drain lines
- momentary high oil flow
- Also suitable for use in
- contaminated environments
- oil filling systems
