# NEWS from the Olaer Group

**Compact, off-line cooling and filter system**

**Cools, cleans and circulates oil day and night**

**Low initial pressure drop**

**Quiet**

**Easy to retrofit when rebuilding a system**

**Equipped with Oiltech's new filter unit FX3**

## Cools, cleans and circulates oil

### New WEG03 cooling and filter system in one compact unit

WEG03 cools, cleans and circulates oil in one compact unit. New WEG03 off-line cooling and filter system operates day and night independently from the main system to avoid differences in pressure and flow conditions. The hydraulic system operates with constantly clean and at the ideal temperature, providing reliability in operation and low maintenance cost.

#### **Compact, quiet and ease of installation**

WEG03 is compact, quiet and easy to retrofit when rebuilding a system.

Good reasons for considering the extra cost of fitting

a WEG03 in your system include efficient operation, less maintenance and a system less likely to suffer from downtime problems.

#### **Ideal in applications exposed to:**

- low oil flow
- unfiltered return lines and drain lines
- momentary high oil flow
- large variations in temperature

Also suitable when used:

- in contaminated environments
- in oil filling systems
